LOCKHEED MARTIN SIGNS NETMAP ANALYTICS AS AUTHORIZED DISTRIBUTOR OF AeroText™ INFORMATION EXTRACTION SOFTWARE

GAITHERSBURG, Md., August 3, 2005– Lockheed Martin [NYSE:LMT] announced today that it has signed a distribution agreement enabling NetMap Analytics to offer AeroText™ information extraction software to international corporate customers.

NetMap Analytics is a privately-owned company based in Sydney, Australia, that specializes in ‘discovery analytics’. Using its powerful link visualization and analysis software NetMap™, analysts can visualize vast volumes of data and apply unique algorithms to reveal the hidden patterns and relationships within. NetMap Analytics has representatives around the world and enjoys a proven track record in servicing a variety of private and public sector clients throughout the Asia Pacific, USA, UK and Europe. The company has developed specialty solutions for the insurance, retail, corporate & government, crime investigation and marketing industries.

The AeroText software will enable NetMap customers to search and extract information from a wide variety of unstructured sources and integrate these results with NetMap’s extensive analytical capabilities.

“Our agreement with NetMap Analytics demonstrates the AeroText tools’ wide-ranging applicability outside intelligence applications,” said Jane Powers, director of Analysis Products & Solutions for Lockheed Martin Integrated Systems & Solutions. “From intelligence gathering for national security to insurance fraud detection, AeroText software can help users quickly extract the information they need from unstructured text. In an information-intensive world, such capability is invaluable.”

Lockheed Martin’s AeroText software finds relevant information, such as entities, relationships and events, automatically in all major formats of natural language text. It not only finds requested information, but also discovers subtle relationships previously unknown to users, significantly reducing research time. It works with multiple languages, can be integrated with other knowledge management tools and can be customized by users to improve search accuracy in specific domains.

“This agreement will allow NetMap’s unique analytical capabilities to be combined with AeroText to create a seamless solution for the extraction, visualization and analysis of both structured and unstructured data”, said Dr John Galloway, founder and Chief Scientist for NetMap Analytics. “With the vast majority of an organization’s data being found in unstructured sources, this solution enables the unlocking of value and the discovery of relationships, clues and insights previously hidden from the analyst.”

Headquartered in Bethesda, Md., Lockheed Martin employs about 130,000 people worldwide and is principally engaged in the research, design, development, manufacture and integration of

advanced technology systems, products and services. The corporation reported 2004 sales of \$35.5 billion.
